It's very easy to create an own photoblog. The simple way to create a photoblog with your photomemories is to login to: <http://www.photoblog.com> or <http://www.wordpress.com> After the registration you can add your photography and send your own photopage link to your friends. 📷

Pros: free, easy to create

Cons: no changeable themes, no own links, no chooseable own domain, no photoblog tool

The other way is to create your own photoblog with your design on your webspace. You need a webspace provider, domain name and the photoblog tool.

The next step is to choose your photoblog software:

- Pixelpost - <http://www.pixelpost.org/>

- Wordpress - <http://wordpress.org/>

After the download you install it on your webspace and choose your template. In the backend of the photoblog tool you can add your photography and descriptions. You can also change the design and themes.
