After the installation you can configure in the backend of pixelpost your photoblog.

Before you upload your picture you will see on the start page

"Coming Soon! Nothing to show. No image to show here or they are set to show in future!"

In the backend you have to login:

<http://www.example.com/admin>

Login with your credentials (you choose it during the pixelpost installation).

Now go to "New Image". Add your photo from your pc to your photoblog and add also title, description and tags.

After the adding you can see on the frontpage your photo.
